drain tissues and return blood to the heart. Low pressure vessels so they have thinner walls. Lumens are larger than arteries however and valves in larger veins prevent backflow of blood. This is because blood returning to the heart often flows against gravity, so lumen has to be bigger to keep up with cardiac output.

Exercise 32 - Anatomy of Blood Vessels Flashcards | Quizlet

Veins need valves to create pressure to pump the blood to the heart. Blood flows away from the heart and, therefore, the pressure is not required.

In the Blood. Because blood plasma seems to transfer the “essence of youth” to the aged brain (and to the heart, liver, and other organs) from young animals, we first asked: is blood also the carrier of pro-youth factors stimulated by exercise? We gave aged mice—about 65 or so in human age—running wheels in their cages.
